

Early Journal Content on JSTOR, Free to Anyone in the World

This article is one of nearly 500,000 scholarly works digitized and made freely available to everyone in the world by JSTOR.

Known as the Early Journal Content, this set of works include research articles, news, letters, and other writings published in more than 200 of the oldest leading academic journals. The works date from the mid-seventeenth to the early twentieth centuries.

We encourage people to read and share the Early Journal Content openly and to tell others that this resource exists. People may post this content online or redistribute in any way for non-commercial purposes.

* Record lost.

Linnaea americana in Indiana.

Linnaea americana Forbes is regarded a decidedly more northern plant than would be expected in our flora. Its presence in a bog at the lower end of Lake Michigan near Mineral Springs (Porter Co.), where I found it this fall, may be accounted for by the fact that the prevailing cold winds from the north that built the dunes make the region somewhat boreal. Other more northern plants associated with it are *Cornus canadensis* Linn. and *Thuja occidentalis* Linn. Of the latter there are still some trees over twelve inches in diameter, and a rather good growth of saplings.

For *Apocynum tomentellum* Nwd. Am. Mid Nat. III., p. 55, substitute *Apocynum tomentulosum*. There was another plant of that name, Greene E. L. Leaflets etc. Vol. I. p. 58.
